

# DAIDALOS

Designing Advanced Interfaces for the Delivery  
and Administration of Location independent  
Optimised personal Services

## PRESS RELEASE

18 May 2006

— for immediate release —

## Infrastructures for secure, pervasive communication

**EU project Daidalos presents research results at a workshop in Brussels  
on 29 June 2006**

**The third public workshop of EU project Daidalos in Brussels on 29 June will present major results from the first phase of the project.**

Daidalos addresses the fact that mobility has become a central aspect of our lives in business, education, and leisure. It deals with rapid technological and societal changes with proliferating technologies and services that have resulted in complex and confusing communications environments for users and network operators. By rethinking fundamental technology and business issues, Daidalos has targeted usable and manageable communication infrastructures for the future. The goal is a seamless, pervasive access to content and services via heterogeneous networks that supports user preferences and context. The project has used a user-centred, scenario-based and operator-driven approach to effectively cover user and business needs.

The focus of the workshop will be on three main areas:

- Security and privacy, including privacy and identity management
- Pervasive service concepts in mobile environments, and
- Automotive scenarios including car-to-car communication

Experts from Deutsche Telekom, Telefónica, Telenor, IBM, BMW, and leading academic institutions will present their findings.

### About the workshop

Title: Daidalos I Final Workshop – Secure network infrastructures  
for pervasive, personalised services

Date: 29 June, 10:00 – 17:15

Venue: European Commission, Avenue de Beaulieu 33, Brussels, Belgium

## DAIDALOS Press Release

Registration deadline: 21 June 2006

Participation is free, but registration is mandatory and binding. Only those who are registered will be admitted, based on "first come - first served". The maximum number of participants is 50.

### **About Daidalos**

Daidalos is an Integrated Project under EU Framework Programme 6 for Research and Development in the Thematic Priority 'Information Society Technologies'. The project is dedicated to the design of advanced network infrastructures and access technologies for location-independent, personalised communication services. The main objective of Daidalos is to develop a future network architecture for systems beyond 3G, based on Mobile IPv6.

47 partners from industry and academia were involved in phase I of the project, which started in 2003 and had a duration of 2.5 years. The follow-up project Daidalos II continues until December 2008. The project budget of Daidalos amounts to € 25.7 million (EC contribution: € 14.7 million) for phase 1 and € 22,1 m (EC contribution: € 13,8 million) for phase 2.

Project coordinator: Riccardo Pascotto, Deutsche Telekom
